### REC\_DS using C\_Week 4\_COD\_Question 1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Imagine a bustling coffee shop, where customers are placing their orders for their favorite coffee drinks. The cafe owner Sheeren wants to efficiently manage the queue of coffee orders using a digital system. She needs a program to handle this queue of orders.

You are tasked with creating a program that implements a queue for coffee orders. Each character in the queue represents a customer's coffee order, with 'L' indicating a latte, 'E' indicating an espresso, 'M' indicating a macchiato, 'O' indicating an iced coffee, and 'N' indicating a nabob.

Customers can place orders and enjoy their delicious coffee drinks.

##### ***Input Format***

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Enqueue the coffee order into the queue. If the choice is 1, the following input is a space-separated character ('L', 'E', 'M', 'O', 'N').

Choice 2: Dequeue a coffee order from the queue.

Choice 3: Display the orders in the queue.

Choice 4: Exit the program.

### ***Output Format***

The output displays messages according to the choice and the status of the queue:

If the choice is 1:

1. Insert the given order into the queue and display "Order for [order] is enqueued." where [order] is the coffee order that is inserted.
2. If the queue is full, print "Queue is full. Cannot enqueue more orders."

If the choice is 2:

1. Dequeue a character from the queue and display "Dequeued Order: " followed by the corresponding order that is dequeued.
2. If the queue is empty without any orders, print "No orders in the queue."

If the choice is 3:

1. The output prints "Orders in the queue are: " followed by the space-separated orders present in the queue.
2. If there are no orders in the queue, print "Queue is empty. No orders available."

If the choice is 4:

1. Exit the program and print "Exiting program"

If any other choice is entered, the output prints "Invalid option."

Refer to the sample output for the exact text and format.

### **Sample Test Case**

Input: 1 L

1 E

1 M

1 O

1 N

1 O

3

2

3

4

Output: Order for L is enqueued.

Order for E is enqueued.

Order for M is enqueued.

Order for O is enqueued.

Order for N is enqueued.

Queue is full. Cannot enqueue more orders.

Orders in the queue are: L E M O N

Dequeued Order: L

Orders in the queue are: E M O N

Exiting program

### **Answer**

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
#define MAX_SIZE 5
```

```
struct CoffeeQueue {  
    char orders[MAX_SIZE];  
    int front, rear;  
};
```

```
void initQueue(struct CoffeeQueue* q) {  
    q->front = -1;  
    q->rear = -1;
```

```
}
```

```
int isFull(struct CoffeeQueue* q) {  
    return (q->rear == MAX_SIZE - 1);  
}
```

```
int isEmpty(struct CoffeeQueue* q) {  
    return (q->front == -1);  
}
```

```
void enqueue(struct CoffeeQueue* q, char order) {  
    if (isFull(q)) {  
        printf("Queue is full. Cannot enqueue more orders.\n");  
    } else {  
        if (q->front == -1) {  
            q->front = 0;  
        }  
        q->rear++;  
        q->orders[q->rear] = order;  
        printf("Order for %c is enqueued.\n", order);  
    }  
}
```

```
void dequeue(struct CoffeeQueue* q) {  
    if (isEmpty(q)) {  
        printf("No orders in the queue.\n");  
    } else {  
        char order = q->orders[q->front];  
        printf("Dequeued Order: %c\n", order);  
        q->front++;  
        if (q->front > q->rear) {  
            q->front = q->rear = -1;  
        }  
    }  
}
```

```
void display(struct CoffeeQueue* q) {  
    if (isEmpty(q)) {  
        printf("Queue is empty. No orders available.\n");  
    } else {  
        printf("Orders in the queue are: ");  
        for (int i = q->front; i <= q->rear; i++) {
```

```
        printf("%c ", q->orders[i]);  
    }  
    printf("\n");  
}  
}
```

```
int main() {  
    struct CoffeeQueue queue;  
    initQueue(&queue);  
  
    int choice;  
    char order;  
  
    while (1) {  
        scanf("%d", &choice);  
  
        switch (choice) {  
            case 1:  
                scanf(" %c", &order);  
                enqueue(&queue, order);  
                break;  
  
            case 2:  
                dequeue(&queue);  
                break;  
  
            case 3:  
                display(&queue);  
                break;  
  
            case 4:  
                printf("Exiting program\n");  
                return 0;  
  
            default:  
                printf("Invalid option.\n");  
        }  
    }  
  
    return 0;  
}
```

**Status :** Correct
