### REC\_DS using C\_Week 1\_COD\_Question 6

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

John is tasked with creating a program to manage student roll numbers using a singly linked list.

Write a program for John that accepts students' roll numbers, inserts them at the end of the linked list, and displays the numbers.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of students.

The second line consists of N space-separated integers, representing the roll numbers of students.

##### ***Output Format***

The output prints the space-separated integers singly linked list, after inserting the roll numbers of students at the end.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

23 85 47 62 31

Output: 23 85 47 62 31

### **Answer**

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    int data;  
    struct Node* next;  
};
```

```
void insert_at_end(struct Node** head, int data) {  
    struct Node* new_node = (struct Node*)malloc(sizeof(struct Node));  
    struct Node* last = *head;  
  
    new_node->data = data;  
    new_node->next = NULL;
```

```
    if (*head == NULL) {  
        *head = new_node;  
        return;  
    }
```

```
    while (last->next != NULL) {  
        last = last->next;  
    }
```

```

    last->next = new_node;
}

void display(struct Node* head) {
    struct Node* current = head;
    while (current != NULL) {
        printf("%d ", current->data);
        current = current->next;
    }
    printf("\n");
}

int main() {
    int n;

    scanf("%d", &n);

    struct Node* head = NULL;

    for (int i = 0; i < n; i++) {
        int roll_number;
        scanf("%d", &roll_number);
        insert_at_end(&head, roll_number);
    }

    display(head);

    return 0;
}

```

**Status :** Correct

**Marks : 10/10**
